### BENEFITS
- Ideal dicamba option to help manage glyphosate-resistant broadleaf weeds such as Palmer amaranth, kochia, waterhemp and marestail, along with other tough-to-control broadleaf weeds such as common lambsquarters and velvetleaf.
- Up to 14 days of soil activity on certain small-seeded broadleaf weeds\(^1\) to help traditional residual herbicides keep fields clean as part of an overall weed control program.
- Designed as an additional option for broadleaf weed control in the Roundup Ready® Xtend Crop System for in-crop use with XtendFlex® soybeans, Roundup Ready 2 Xtend® soybeans and cotton with XtendFlex® Technology.
- XtendiMax® herbicide with VaporGrip® Technology provides a significant reduction in volatility potential compared to Clarity.\(^\dagger\)
- All applications of this product require the inclusion of a volatility reduction adjuvant (VRA), such as a VaporGrip® Xtra Agent product or an approved VRA equivalent, in the tank mix.
- VaporGrip® Xtra Agent is a tank mix adjuvant that delivers additional VaporGrip® Technology to spray tanks for even further reduction of potential dicamba volatility.

### 95% SATISFACTION RATE
- Satisfaction rate of 95% on average over the last four years by farmers who used XtendiMax herbicide with VaporGrip Technology\(^2\).

### XtendiMax Herbicide with VaporGrip® Technology

** 22 fl oz/A = 0.5 lb acid equivalent (a.e.)/A.

---

\(^1\) Performance may vary, depending on rainfall and soil type. Always use dicamba with traditional residual herbicides in pre-emergence and postemergence applications that have different, effective sites of action, along with other Diversified Weed Management Practices.

\(^\dagger\) Clarity® and DMA and acid formulations of dicamba are not approved for in-crop use in the Roundup Ready® Xtend Crop System.

\(^2\) Grower Surveys – August 2017, September 2018, September 2019, October 2020 – All growers surveyed were required to have 50+ acres of Roundup Ready 2 Xtend® soybeans and treat at least some acres with XtendiMax with VaporGrip Technology to qualify. Average of 95% based on results of 97% in 2017, 93% in 2018, 96% in 2019 and 94% in 2020.
**Bayer Humidome** Trials
Humidome** studies measuring the air concentration of dicamba demonstrate that VaporGrip® Xtra Agent provides additional volatility reduction.

![Graph showing reduction of volatility potential with VaporGrip® Xtra Agent](image)

* Testing of VaporGrip® Xtra Agent was done in combination with XtendiMax® Herbicide with VaporGrip® Technology.

XtendiMax® Herbicide with VaporGrip® Technology is part of the Roundup Ready® Xtend Crop System, is a restricted use pesticide and must be used with VaporGrip® Technology. (An equivalent volatility reduction for approved tank-mix products including VRAs and DRAs, nozzles and other important label information visit XtendiMaxApplicationRequirements.com.

* Testing of VaporGrip® Xtra Agent was done in combination with XtendiMax® Herbicide with VaporGrip® Technology.

---

**Roundup Ready 2 X tend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with X tendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your local brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.
